WHERE AM I?

Find me just off Toodyay Road on Salt Valley Road. There is parking available opposite the tree.

WHILE YOU ARE HERE...

Why not say hi to my friends at Panorama Reserve, Panorama Road, off Salt Valley Road.

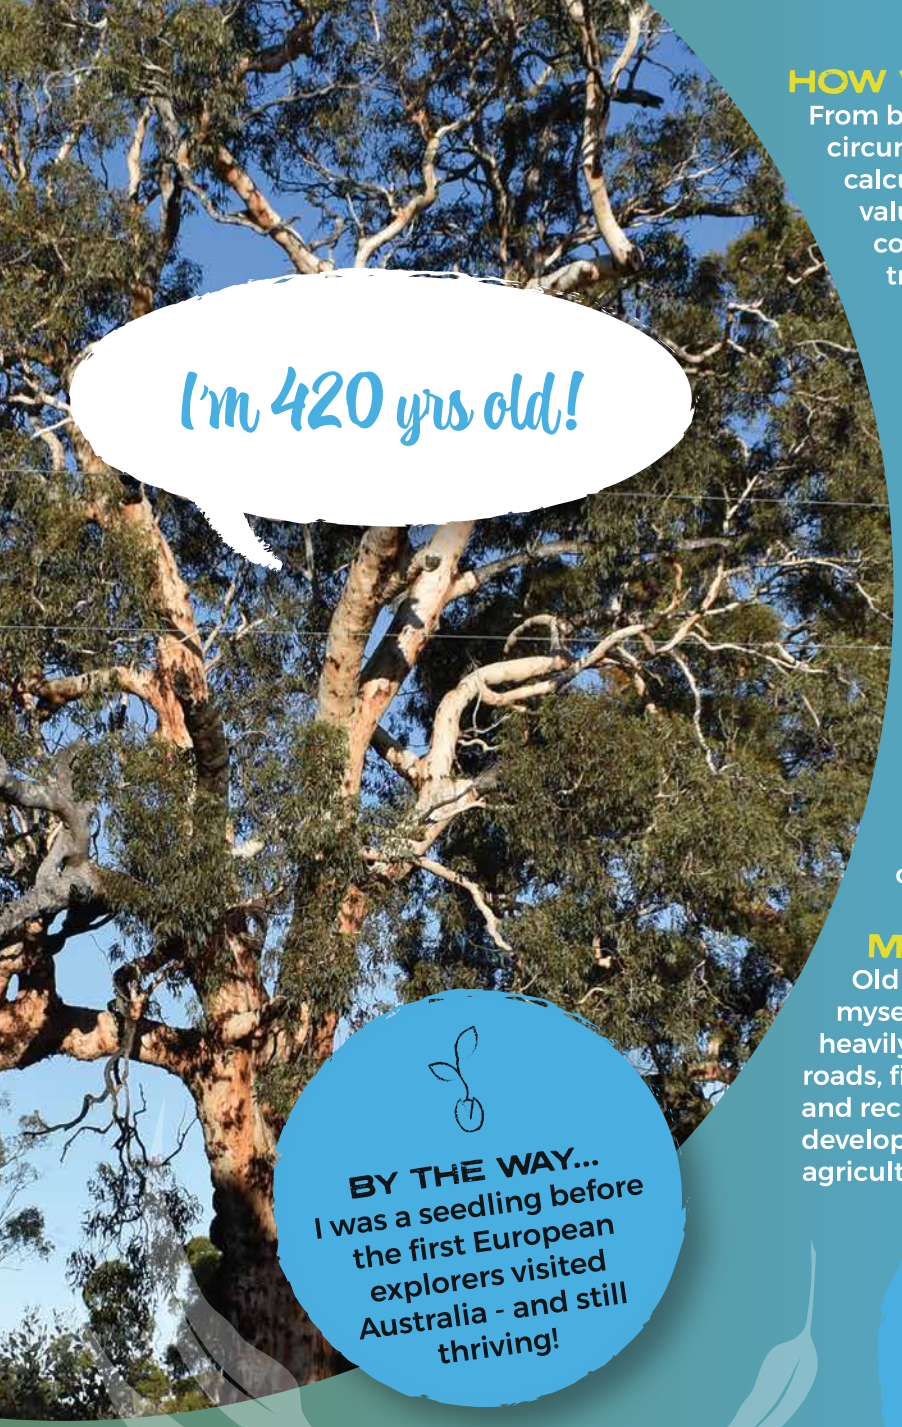
Acknowledging the Balardong, Whadjuk and Yuat peoples.

POWDER-BARK WANDOO

Eucalyptus accedens

I'm special



I'm 420 yrs old!

BY THE WAY...
I was a seedling before the first European explorers visited Australia - and still thriving!

HOW WAS MY AGE ESTIMATED?

From breast height width (BHW) the circumference is measured then the radius is calculated and doubled for the diameter. This value along with the height of the tree is then compared to a chart of powder-bark wandoo trees of known age.

WHO MEASURED ME?

Safe and Scenic Toodyay Roads and verified by the Wheatbelt Natural Resource Management.

WHERE DO I GROW?

Powder-bark wandoos, are mainly confined to the north or north-eastern slopes of the Darling Range with isolated populations occurring in the western fringes of the Central Wheatbelt.

We are found on hilltops, slopes and gravelly soil and often associated with tall eucalypts like marri, jarrah, or wandoo.

MY THREATS

Old trees such as myself are being heavily cleared for roads, firewood, urban and recreational development and agriculture.

WHAT DO I SUPPORT?

As a "hollow hero", I provide breeding hollows for the endangered Carnaby's Black-Cockatoo: *ngoolark* to the Noongar peoples.

DID YOU KNOW?
It takes over 100 years for me to form hollows suitable for Carnaby's Black-Cockatoo nests!

WHO ELSE LIKES MY HOLLOWS?

I provide the habitat that is the most used of all the trees by flying, crawling and climbing creatures.

Birds, reptiles, insects, spiders, native bees, and marsupials like possums and phascogales love my hollows.

WHAT ELSE BENEFITS? YOU!

Like all trees, we improve air quality, provide shade, cool the air temperature and enhance the environment.
